Experience

Banque Libano-Française
Jan 2016 - Present
Senior System Administrator

VMware Administration: Installed and configured vCenter Server, ESXi hosts, storage, networking, and security for the virtual environment. Created, deployed, and managed virtual machines, including resource provisioning, guest OS configuration, and VM health monitoring.

VDI Horizon 8 Project Manager: Defined and implemented a VDI architecture using Horizon 8, including resource allocation and user access controls. Created and managed virtual desktops and application pools to meet user needs.

Microsoft Windows Server Administrator: Installed and configured Windows Server instances, including Active Directory, file services, print services, and network roles. Managed user accounts, groups, and permissions. Implemented security best practices, including group policies and system hardening.

Python Development and Automation: Developed custom scripts for Active Directory, VSphere and Oracle using Python libraries. Integrated Django backend framework for robust data management and API interaction. Utilized Large Language Models (LLMs) to incorporate private AI for Company data analysis/tasks.
